Trading Desk

An AI agent loop on a live market-data platform, with hard order guardrails and a decision journal.

This is a personal trading platform I've been building for a while. Recently I've been handing more of it to AI agents. Trading is a good place to test that, because a mistake costs real money right away. It all runs on a paper account.

HOW IT RUNS

HIGHLIGHTS

- An agent loop on live market data, running on a paper account.
- Hard limits the agent can't argue with: a symbol allow-list, a daily order cap and a maximum order size.
- Every attempted order is journaled with the agent's written reason.

AT A GLANCE

32

tools the agent can call

576

tests passing

Python • SQLite • MCP • Interactive Brokers API

Intermundia Labs builds systems like this for other teams: agent workflows with a sign-off, data feeds, model evaluation and data migrations.
